Xcite Quiz 3

Points: 90%

✓ **Correct**

1. Which features apply to the HV transformer?

- [x] One HV cable
- [ ] Two HV cables
- [x] Max. -150 kV to Ground
- [ ] Max. + 140 kV and -140 kV to ground

✓ **Correct**

2. Which special features apply to the VECTRON tube?

- [x] Low kV imaging (70-90 kV)
- [ ] Rotating envelope tube
- [x] Up to 1200 mA tube current at 70-80 kV
- [ ] Zero heat storage capacity

✕ **Incorrect**

3. Identify the tasks of the U731 Motor Controller on PHS Vario2.

- [ ] Supplies power to the TCB
- [x] Controls the power delivered to the Horizontal Motor
- [ ] Receives the horizontal movement feedback directly from the P-Path and C-Path sensors.
- [x] Receives the horizontal movement commands from the TCB
- [ ] Stops the motor directing the excess voltage to the Brake resistor

✓ **Correct**

4. Describe the exact location of B732, the C-path encoder (magnetic incremental linear encoder), on the PHS Vario 2.

- [ ] Mounted to the table support frame.
- [ ] Connected to the horizontal motor assembly.
- [x] Mounted to the table top moving carriage.
- [x] Under the table top.
- [ ] On the rear part of the table.

✓ **Correct**

5. Predict Identify some of the possible root causes of the following scenario: PHS Vario 2 is not reaching standby. 230 V AC are measured on both connector X112 on the PDB and on X701 on the TCB, but there is no activity or LEDs lighting on the

TCB or any of the Motor Controllers.

- [x] Defective PS G701.
- [ ] Contactor K3 is not engaged.
- [ ] Defective Power Relay K1 on PHS electronic unit.
- [x] Faulty connection on cable W106.
- [x] Fuse F101 (5AT) on G701 has blown.

✓ **Correct**

6. Investigate a malfunction of the Vertical Motor Controller U711 on a PHS Vario RT. Identify some of the cables and connectors that should be checked. Select all that apply

- [ ] Cable W205 connectors M711.X2 or D703.X23
- [x] Cable W201 connectors U711.X1 ⇒ Vertical motor M711.X1
- [ ] Cable W102 connectors U711.X1 ⇒ Vertical motor M711.X1
- [x] Cable W109, connectors TCB D703.X50 ⇔ U711.X4/X5
- [x] Cable W110, connectors TCB D703.X2 → Power relay K1 → U711.X2

✓ **Correct**

7. Choose which message IDs or domains could report problems with the PHS

- [x] CT_SDN* for SiDaNet messages
- [ ] CT_ITX* for IRS server messages

- [x] CT_SAF* for safety messages
- [x] CT_PHS* for patient table messages

✓ **Correct**

8. Summarize the functions of the NPU installed inside the aCTiDAS.

- ( ) This NPU serves as a network card for the SiDaNet Network, interfacing with the DSM.
- ( ) Powers and monitors the CDT transceiver modules (transmitter and receiver) and establish data encryption.
- ( ) It starts up the SiDaNet network, checks consistency of the configuration and the SiDaNetRuntime version of all SiDaNet nodes, and initiates an automatic update of the SiDaNet nodes if necessary. Powers and monitors the CDT transceiver modules (transmitter and receiver).
- (•) The NPU_rot basically serves as a switch and as device module of the DMS simultaneously. Powers and monitors the CDT transceiver modules (transmitter and receiver).
- ( ) The NPU_is only used to power and monitors the CDT transceiver modules (transmitter and receiver).

✓ **Correct**

9. Summarize the functions of the NPU installed inside the iMAS.

- ( ) This NPU serves as a network card for the SiDaNet Network, interfacing with the DSM.
- ( ) Powers and monitors the CDT transceiver modules (transmitter and receiver) and establish data encryption.
- (•) It starts up the SiDaNet network, checks consistency of the configuration and the SiDaNetRuntime version of all SiDaNet nodes, and initiates an automatic update of the SiDaNet nodes if necessary. Powers and monitors the CDT transceiver modules (transmitter and receiver).

- The NPU_rot basically serves as a switch and as device module of the DMS simultaneously. Powers and monitors the CDT transceiver modules (transmitter and receiver).
- The NPU_is only used to power and monitors the CDT transceiver modules (transmitter and receiver).

✓ **Correct**

10. The PMM is not receiving power. Identify the source from which the PMM receives its power.

- Via the LMAS (D702)
- Via the Power Supply (G702)
- Via the Table Control Board (D703)
- Via the Power Supply (G701)
